

Whale Flow Strategy

Profitable every year for 5 consecutive years

Sharpe Ratio 2.20 | Max Drawdown < 8%

5-Year Performance

May 2021 — May 2026 | 1% risk per trade

Total return	+338%	(10,000→43,822)
Annualized return	34.5% / year	
Maximum drawdown	7.99%	
Sharpe ratio	2.20	
Win rate (per coin)	41 — 46%	
Win/loss ratio	~2.5 : 1	
Last 12 months	+28.28%	← recent strength

Portfolio Equity Curve (\$10,000 starting)

All 5 Years Positive

Including the 2022 bear market when BTC dropped 65%

Single-Digit Drawdown Every Year

Maximum peak-to-trough loss within each calendar year

The Strategy

Universe: BTC, ETH, LINK, SOL, AVAX

(All top-10 by market cap; deep institutional liquidity)

Signal: Whale-positioning data (proprietary alpha)

Frequency: 30 — 40 trades per coin per year

Position: Long + Short, exit on signal reversal

Risk: 1% of equity per trade

Stress Test — 2022 Bear Market

Bitcoin in 2022:

−65%

(peak-to-trough)

This strategy in 2022:

+21.06%

with only 6.9% drawdown

Made money DURING the worst crypto crash since 2018

Demonstrates true alpha — not just "long crypto with leverage"

Benchmark Comparison

5-year cumulative returns (2021 — 2026)

Strategy	5yr Return	Sharpe	Max DD
This Strategy	+338%	2.20	8%
BTC buy-and-hold	~+50% (volatile)	~0.6	~75%
S&P 500	~+85%	0.9	~25%
Typical hedge fund	~+50%	1.0	~15%

Scalability — Same Strategy, Dial the Risk

Linear scaling. The strategy edge remains constant.

Risk Profile	Annual Return	Max DD
Conservative (0.5%)	~17%	~4%
Recommended (1%)	34%	8%
Moderate (2%)	~68%	~16%
Aggressive (3%)	~103%	~24%
