Crypto Perpetuals — Order-Flow & Event-Driven Momentum

Detecting the footprint of large capital to capture explosive moves in newly-listed, low-float coins — entering before the crowd and riding the move the flow confirms.

Strategy Overview

Whale Tracks is a systematic strategy for crypto perpetual futures. It reads the footprint of large players through order-flow (cumulative volume delta, CVD) and volume-surge signals to identify low-float, newly-listed coins poised for explosive, event-driven moves. It enters in the direction the flow confirms and rides the continuation, exiting on a protective stop or a time limit.

Methodology

- **Universe:** liquid USDT-margined perpetuals, dynamically re-screened for high-volatility, low-float names.
- **Catalyst:** volume-surge ignition, frequently around new-listing and liquidity events.
- **Confirmation:** order-flow (CVD) must agree with the intended direction before entry.
- **Direction:** continuation — trade with the confirmed flow, never against it.
- **Entry / Exit:** immediate on confirmation; fixed protective stop plus a time-based exit, with no profit caps so winners run.
- **Sizing:** small, equal-weight positions; maximum 8 concurrent; per-coin size capped to a fraction of daily volume.

Validation

Performance is established by a **2-year walk-forward, out-of-sample test** (Aug 2024 – Jun 2026) across **520+ coins**, comprising **1,580 trades**. The tradable universe is re-screened every 21 days using only prior data, and the rules are held fixed throughout — no curve-fitting. Results are net of fees, slippage and carrying costs. Returns are fat-tailed: a minority of high-payoff trades drive performance, so the system takes every qualifying signal and diversifies broadly.

Example — Entering Before the Move

A representative long: MYX traded flat for days, then ignited. The system bought into the early breakout (2025-09-07) and exited into strength (2025-09-10) for **+898%** — the fat-tail outcome the strategy is built to capture.

Monthly Performance

Month	Return	Max DD	Trades	Win %
2024-08	-0.9%	-1.3%	18	56%
2024-09	-1.8%	-2.6%	19	47%
2024-10	+3.6%	-1.6%	48	62%
2024-11	-7.1%	-11.1%	75	32%
2024-12	+12.6%	-3.0%	67	61%
2025-01	+6.4%	-3.8%	67	55%
2025-02	+11.1%	-3.5%	61	43%
2025-03	+5.8%	-4.1%	59	56%
2025-04	-0.8%	-7.1%	71	39%
2025-05	+3.9%	-4.7%	73	48%
2025-06	+2.4%	-2.7%	67	52%
2025-07	+2.7%	-5.1%	88	45%
2025-08	+12.5%	-3.1%	80	51%
2025-09	+42.4%	-3.0%	80	45%
2025-10	+4.9%	-7.8%	101	50%
2025-11	+2.5%	-5.4%	98	47%
2025-12	+8.4%	-4.8%	86	42%
2026-01	+0.5%	-7.0%	89	48%
2026-02	+10.8%	-2.6%	86	47%
2026-03	+2.6%	-3.9%	79	52%
2026-04	+27.0%	-5.7%	72	39%
2026-05	+3.7%	-2.7%	75	56%
2026-06	+7.2%	-0.8%	21	38%

Annual Performance

Year	Return	Max DD	Trades	Win %
2024	+5%	-11.1%	227	50%
2025	+154%	-10.8%	931	48%
2026	+61%	-7.0%	422	48%

Note: 2024 and 2026 are partial years. Drawdown is the worst intra-period peak-to-trough decline.

Risk Management

Every position carries a hard stop; total exposure is capped by an 8-position limit and by per-coin liquidity limits; the book is marked-to-market each hour. The strategy is designed for small-to-mid capital and is capacity-limited by design — it deliberately trades only where the edge is liquid enough to capture.

Results shown are based on historical and walk-forward (out-of-sample) backtesting and are provided for informational purposes only. Past performance is not indicative of future results. Figures are gross of taxes and assume modeled execution; live trading results will differ. This document is not investment advice or an offer to manage funds.
